

JWT Hands-on

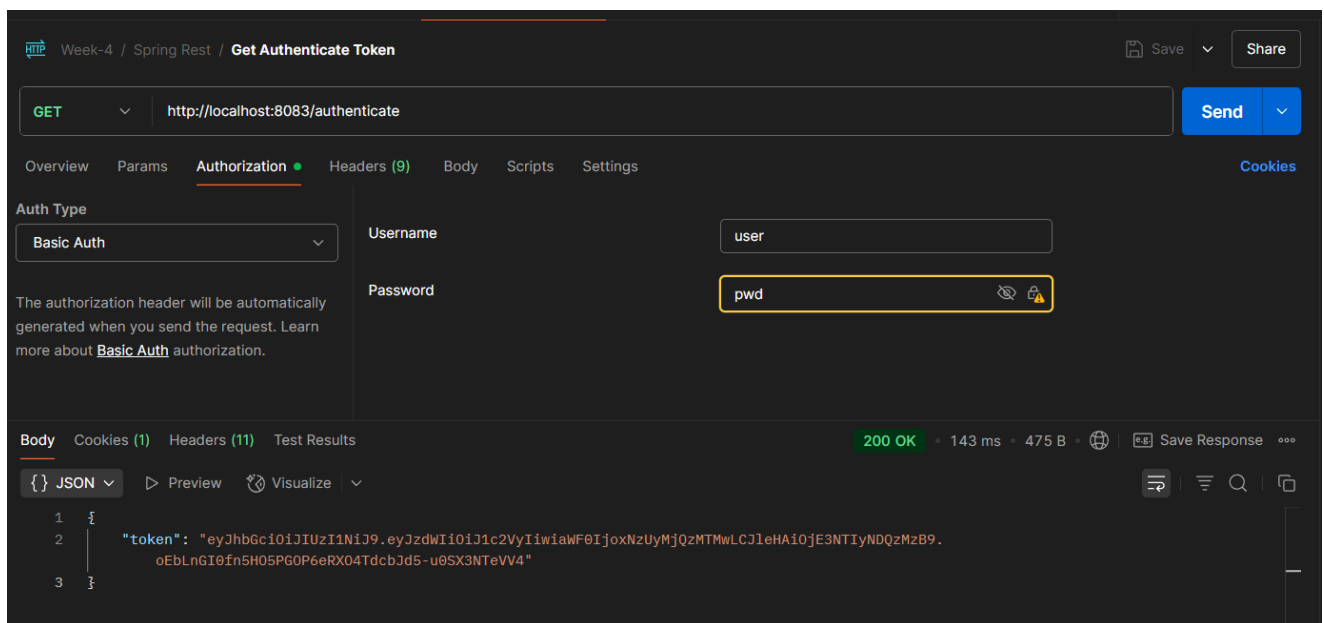

Source Code: [Here](#)

Create authentication service that returns JWT Code

- [SecurityConfig.java](#)
- [JwtAuthorizationFilter.java](#)
- [AuthenticationController.java](#)

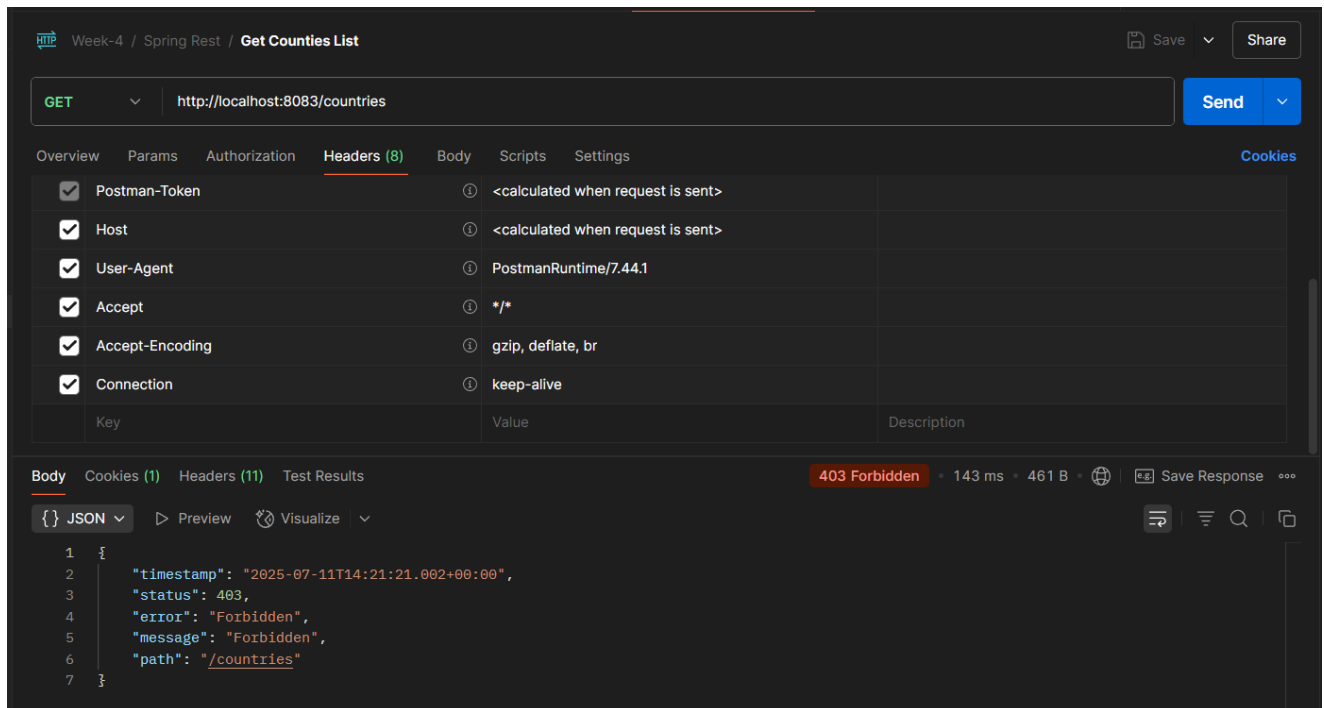

Result

Generating token with basic authentication details

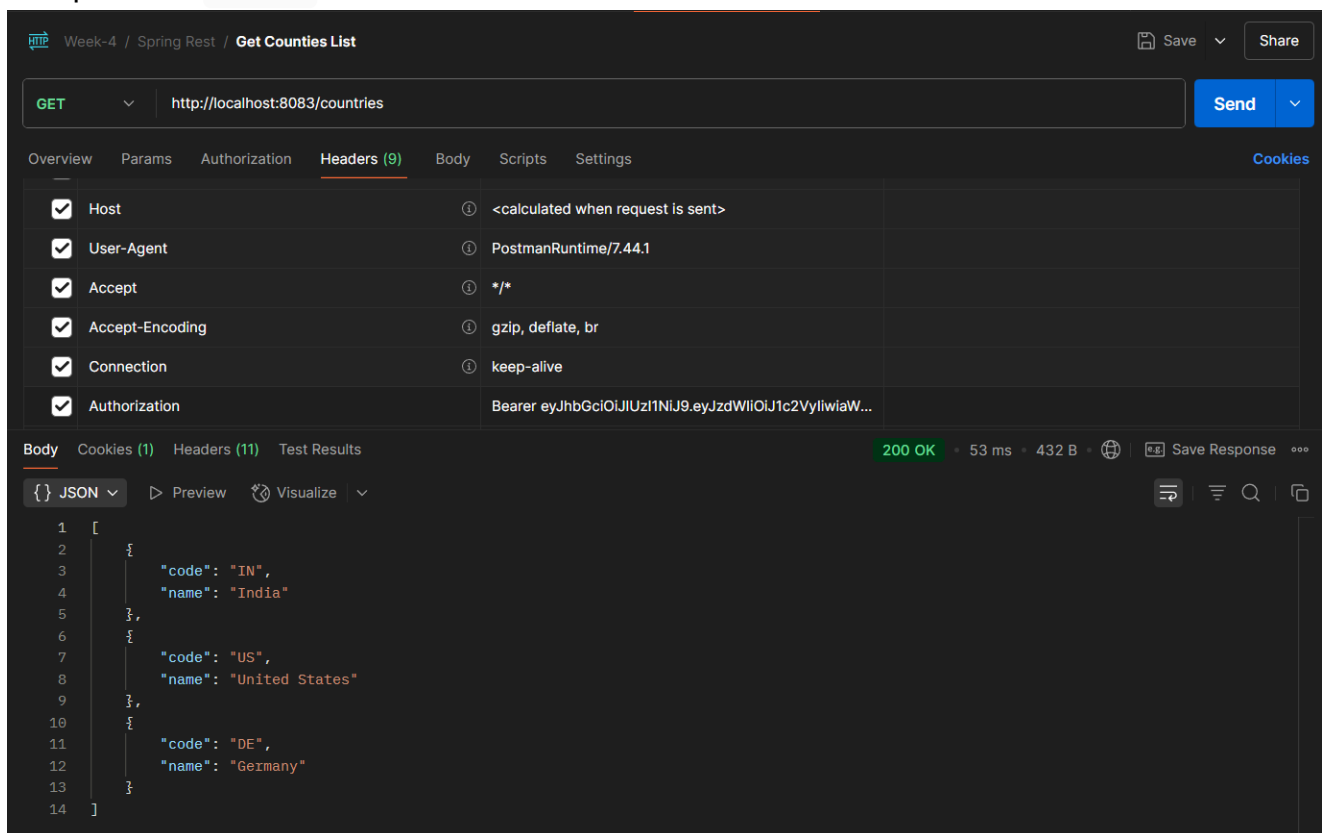

Trying to fetch countries list without token

Here this request is failed as we haven't provided any authentication token or valid token in header.

Fetching countries list by providing authentication token in header

Here fetching countries list is successful as we have provided authentication token in header with prefix as `Bearer`.

Console logs that logged with Logger
